## NEW FARM AND INDUSTRIAL MACHINERY DEVELOPED

SERIAL PRODUCTION OF NEW FARM MACHINERY -- Vjesnik, No 1197, 7 Mar 49

The Osijek Farm Machinery Factory will expand its production of farm machinery and tools considerably in 1949. Besides its previous production of the standard types, in the near future the factory will begin to produce several new types including: machines for planting potatoes, cultivators, machines for spreading artificial fertilizer, reapers for sunflowers and hemp, horse-drawn rakes, and a large variety of farm tools.

HUMIDITY CONTROL APPARATUS DEVELOPED -- Borba, No 58, 9 Mar 49

Dr Vladislav Sverd has developed an apparatus for measuring the humidity in the air in industrial enterprises. Such instruments, of particular importance in textile mills and tobacco factories, have always had to be imported in the past.

The apparatus is of such simple construction that it can be made in any cabinet-making shop. It operates by automatically starting a ventilator whenever the humidity rises above the proper degree.
